Charging Warnings

WARNING: Read and follow all precautions and instructions before use.

Improper use of batteries can result in fire, rupture, or electrolyte leak causing serious injury and damage to property.

- Never leave batteries near fire, an ignition source, a heat-generating device, water or in extreme temperatures.
- Never exceed the recommended charge or discharge rate
- Never short-circuit or alter batteries or related wires in any way
- Only use chargers designed for charging lead-acid batteries and in the correct program mode
- Never leave charging batteries unattended. Disconnect charger if batteries become hot
- Never charge in airtight conditions.
- Dispose of batteries properly
- Keep out of the reach of children at all times

CAUTION: Avoid any impact on batteries. If this occurs, observe the battery pack in a safe area for 10 minutes. If any problems persist, discontinue use and contact Horizon Hobby.

Charger Instructions

- This charger is designed to charge a 12-volt wet-cell battery and charges at a rate of 600mA. Therefore, the charging time for a 6Ah battery is 12 hours. A 7Ah battery would require approximately 14 hours to be completely charged.
- To charge your battery, plug the charger into a 110V AC outlet. Next, connect the lead with the red insulated alligator clip to the positive terminal of the battery. Attach the lead with the black insulated alligator clip to the negative terminal.
- The red LED light on the charger will illuminate only when the battery is in a very low discharge state. The higher the charge state of your battery, the dimmer the LED light will illuminate.
- To insure a full charge of your battery, it's best to use a voltmeter and monitor the charge rate of the battery.
- When the voltage reading climbs and then begins to "fall back" or, in other words, the numbers on the voltmeter begin to decrease, the battery is then fully charged.
