WARNING AGAINST COUNTERFEIT PRODUCTS: If you ever need to replace your Spektrum receiver found
in a Horizon Hobby product, always purchase from Horizon Hobby, LLC or a Horizon Hobby authorized dealer
to ensure authentic high-quality Spektrum product. Horizon Hobby, LLC disclaims all support and warranty with
regards, but not limited to, compatibility and performance of counterfeit products or products claiming compatibility
with DSM or Spektrum technology.

Meaning of Special Language:
The following terms are used throughout the product literature to indicate various levels of potential harm when operating this product:

WARNING: Procedures, which if not properly followed, create the probability of property damage, collateral damage, and serious injury OR create a high probability of superficial injury.

CAUTION: Procedures, which if not properly followed, create the probability of physical property damage AND a possibility of serious injury.

NOTICE: Procedures, which if not properly followed, create a possibility of physical property damage AND little or no possibility of injury.

CAUTION: All instructions and warnings must be followed exactly. Mishandling of Li-Po batteries can result in a fire, personal injury, and/or property damage.

• NEVER LEAVE CHARGING BATTERIES UNATTENDED.
• NEVER CHARGE BATTERIES OVERNIGHT.
• By handling, charging or using the included Li-Po battery, you assume all
risks associated with lithium batteries.
• If at any time the battery begins to balloon or swell, discontinue use
immediately. If charging or discharging, discontinue and disconnect.
Continuing to use, charge or discharge a battery that is ballooning or
swelling can result in fire.
• Always store the battery at room temperature in a dry area for best results.
• Always transport or temporarily store the battery in a temperature range of
40–120° F (5–49° C). Do not store the battery or aircraft in a car or direct
sunlight. If stored in a hot car, the battery can be damaged or even
cause fire.
• Always charge batteries outside recommended levels.
• Never attempt to dismantle or alter the charger.
• Never allow minors to charge battery packs.
• Never charge batteries in extremely hot or cold places (recommended
between 40–120° F or 5–49° C) or place in direct sunlight.
• NEVER OPERATE A CHARGER SPECIFICALLY DESIGNED TO CHARGE LI-PO
BATTERIES. Failure to charge the battery with a compatible charger may
cause fire resulting in personal injury and/or property damage
• Never charge Li-Po cells to below 3V under load.
• Never cover warning labels with hook and loop strips.
• Never leave charging batteries unattended.
• Never charge batteries with damaged wiring.
• Never operate aircraft with damaged wiring.
• Never touch moving parts.

SAFETY PRECAUTIONS AND WARNINGS

As the user of this product, you are solely responsible for operating in a
manner that does not endanger yourself and others or result in damage to the
product or the property of others.

• Always keep a safe distance in all directions around your model to avoid
collisions or injury. This model is controlled by a radio signal subject to
interference from many sources outside your control. Interference can cause
momentary loss of control.
• Always operate your model in open spaces away from full-size vehicles,
traffic and people.
• Always carefully follow the directions and warnings for this and any optional
support equipment (chargers, rechargeable battery packs, etc.).
• Always keep all chemicals, small parts and anything electrical out of the
reach of children.
• Always avoid water exposure to all equipment not specifically designed and
protected for this purpose. Moisture causes damage to electronics.
• Never place any portion of the model in your mouth as it could cause serious
injury or even death.
• Never operate your model with low transmitter batteries.
• Always keep aircraft in sight and under control.
• Always use fully charged batteries.
• Always keep transmitter powered on while aircraft is powered.
• Always remove batteries before disassembly.
• Always keep moving parts clean.
• Always keep parts dry.
• Always let parts cool after use before touching.
• Always remove batteries after use.
• Always ensure failsafe is properly set before flying.
• Never operate aircraft with damaged wiring.
• Never touch moving parts.

Flight Timer Setting 5 minutes

Specifications

Motor: BL15 Brushless Outrunner 850Kv (EFLM4115)
ESC: 40 AMP Brushless ESC (EFLA1140W)
Servo: 9 gram (SPMSA330)
Receiver: Spektrum™ AR636A 6-Channel Sport Receiver (SPMAR636)
Recommended Battery: 11.1V 3S 2200mAh 30C Li-Po (EFLB22003S30)
Recommended Battery Charger: 3-cell Li-Po battery balancing charger
Recommended Transmitter: Full-Range 6 channel (or more) 2.4GHz with Spektrum DSM2®/DSMX® technology with adjustable Dual Rates.

To register your product online, visit www.e-fliterc.com
**Preflight**

1. Remove and inspect contents.
2. Read this instruction manual thoroughly.
3. Charge the flight battery.
4. Setup Transmitter using transmitter setup chart.
5. Fully assemble the airplane.
6. Install the flight battery in the aircraft (once it has been fully charged).
7. Check the Center of Gravity (CG).
8. Bind the aircraft to your transmitter.
10. Test the retraction operation.
11. Test the flap operation.
12. Perform the Control Direction Test with the transmitter.
13. Perform the AS3X Control Direction Test with the aircraft.
14. Adjust flight controls and transmitter.
15. Perform a radio system Range Test.
16. Find a safe open area to fly.
17. Plan flight for flying field conditions.

**Transmitter Setup**

**IMPORTANT:** After you set up your model, always rebind the transmitter and receiver to set the desired failsafe positions.

**Dual Rates**

Take first flights in Low Rate. For landings, use high rate elevator.

**NOTICE:** To ensure AS3X functions properly, do not lower rate values below 50%. If lower rates are desired, manually adjust the position of the pushrods on the servo arm.

**NOTICE:** If oscillation occurs at high speed, refer to the Troubleshooting Guide for more information.

**Expo**

After first flights, you may adjust expo in your transmitter or refer to the AR636 receiver manual for expo adjustment.

---

**Computerized Transmitter Setup**

(DX6i, DX6, DX7, DX7S, DX8, DX9, DX10t and DX18)

Start all transmitter programming with a blank ACRO model (do a model reset), then name the model.

<table>
<thead>
<tr>
<th>Set Dual Rates to:</th>
<th>HIGH 100%</th>
<th>LOW 70%</th>
</tr>
</thead>
<tbody>
<tr>
<td>Set Servo Travel to:</td>
<td>100%</td>
<td></td>
</tr>
</tbody>
</table>

**DX6i**

1. Go to the SETUP LIST MENU
2. Set MODEL TYPE: ACRO
3. Go to ADJUST LIST MENU
4. Set FLAPS: Norm → 100 Flap LAND → 90 Flap

**DX7S**

1. Go to the SYSTEM SETUP
2. Set MODEL TYPE: AIRPLANE
3. Set WING TYPE: 1 AIL 1 FLAP
4. Go to the FUNCTION LIST
5. Set SERVO SETUP: Reverse GEAR
6. Set FLAP SYSTEM: Choose Flap
   - NORM: 100% FLAP
   - MID: 0% FLAP
   - LAND: -90% FLAP
   - SPEED 2.0: SWITCH = FLAP

**DX8**

1. Go to the SYSTEM SETUP
2. Set MODEL TYPE: AIRPLANE
3. Set AIRCRAFT TYPE: WING: 1 AIL 1 FLAP
4. Go to the FUNCTION LIST
5. Set SERVO SETUP: Reverse GEAR
6. Set FLAP SYSTEM: SELECT SWITCH D:
   - POS 0: 100% FLAP
   - POS 1: 0% FLAP
   - POS 2: -90% FLAP
   - SPEED 2.0
Horizontal Tail Installation

1. Slide the horizontal tail tube (A) into the hole in the rear of the fuselage.
2. Install the 2 piece (left and right) horizontal tail as shown. Ensure the control horn faces down.
3. Secure the two horizontal tail pieces in place using the 2 included screws (B).
4. Attach the clevis to the elevator control horn (see instructions for clevis connection).
**Model Assembly Continued**

**Wing Installation**

1. Remove the canopy hatch.

2. Guide the Flaps, Retracts and Aileron servo connectors (A) through the hole (B) located in the bottom of the fuselage as shown.

   **Tip:** If needed, use hemostats or pliers to pull the servo connectors into the fuselage.

3. Connect the Flaps, Retracts and Aileron connectors to respective Y-harnesses connected to the receiver. The left and right servos can be connected to either side of a Y-harness.

   **IMPORTANT:** The ailerons must be connected to the receiver's AILE (#2 channel) with a Y-harness (included) for the AS3X® system to function properly.

4. Align the wing with the fuselage and secure it into position using the included 4 screws (C).

   **CAUTION:** DO NOT crush or otherwise damage the wiring when attaching the wing to the fuselage.

5. Reinstall the canopy hatch on the fuselage.

Disassemble in reverse order.

---

**Clevis Installation**

- Pull the tube from the clevis to the linkage.
- Carefully spread the clevis, then insert the clevis pin into the desired hole in the control horn.
- Move the tube to hold the clevis on the control horn.

---

**Control Surface Centering**

After assembly and transmitter setup, confirm that the control surfaces are centered. If the control surfaces are not centered, mechanically center the control surfaces by adjusting the linkages.

If adjustment is required, turn the clevis on the linkage to change the length of the linkage between the servo arm and the control horn.

After binding a transmitter to the aircraft receiver, set the trims and sub-trims to 0, then adjust the clevises to center the control surfaces.
Model Assembly Continued

Propeller Installation

**IMPORTANT:** It is recommended to install the propeller after all system setups are completed to reduce the chance of accidental propeller strike.

1. Install the spinner back plate (E), propeller (D) and collet (C) onto the motor shaft (F). The propeller size numbers (10.5 x 8) must face out from the motor for correct propeller operation.

2. Tighten the collet by using a small screw driver or hex wrench inserted into the small hole (Inset).

3. Align and install the spinner (B) with a small screw (A).

Control Horn and Servo Arm Settings

The table to the right shows the factory settings for the control horns and servo arms. Fly the aircraft at factory settings before making changes.

**NOTICE:** If control throws are changed from the factory settings, the AR636 gain values may need to be adjusted. Refer to the Spektrum AR636 manual for adjustment of gain values.

After flying, you may choose to adjust the linkage positions for the desired control response. See the table to the right.

More control throw | Less control throw

Optional Drop Tank Installation

**Drop Tank**

Slide the optional drop tanks (A) into the rails (B) on each wing.

Check the Center of Gravity with the drop tanks installed. See the Adjusting the Center of Gravity instructions for more information.
Optional Antenna Mast Installation

Antenna Mast
Slide the antenna mast (C) into the slot (D) on top of the fuselage.

Battery Installation and ESC Arming

Battery Selection
We recommend the E-flite® 2200mAh 11.1V 3S 30C Li-Po battery (EFLB22003S30). Refer to the Optional Parts List for other recommended batteries. If using a battery other than those listed, the battery should be within the range of capacity, dimensions and weight of the E-flite Li-Po battery packs to fit in the fuselage. Be sure the model balances at the recommended CG.

1. Lower the throttle and throttle trim to the lowest settings. Power on the Transmitter, then wait 5 seconds.
2. Carefully lift the back of the canopy hatch (A) to remove.
3. Slide the battery tray (B) out of the battery compartment.
4. For added security apply the loop side (soft side) of the optional hook and loop tape (C) to the bottom of your battery and the hook side to the battery tray.
5. Install a fully charged battery (D) on the front edge of the battery tray as shown and secure it using the hook and loop straps (E).
6. Align the battery tray with the tracks in the battery compartment and slide the tray all the way forward until the tray locks.
7. Connect the battery to the ESC (the ESC is now armed).
8. Keep the aircraft immobile and away from wind or the system will not initialize.
   - The ESC will sound a series of tones (refer to step 6 of the binding instructions for more information).
   - An LED will light on the receiver.

   If the ESC sounds a continuous double beep after the flight battery is connected, recharge or replace the battery.

9. Reinstall the canopy hatch.

CAUTION: Always keep hands away from the propeller. When armed, the motor will turn the propeller in response to any throttle movement.
Transmitter and Receiver Binding / Switching ON and OFF SAFE® Select

This product requires an approved Spektrum™ DSM2®/DSMX® compatible transmitter. Visit www.bindnfly.com for a complete list of approved transmitters.

The aircraft has an optional SAFE Select feature, which can be switched ON or OFF easily by binding in a specific manner as described below.

IMPORTANT: Before binding a transmitter, read the Transmitter Setup section of this manual to ensure that your transmitter is properly programmed for this aircraft.

<table>
<thead>
<tr>
<th>Bind Plug Installation</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image.jpg" alt="Bind Plug" /></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Binding Procedure / Switching ON SAFE Select</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>IMPORTANT:</strong> The included AR636 receiver has been programmed for operation specifically for this aircraft. Refer to the receiver manual for correct setup if the receiver is replaced or is used in another aircraft.</td>
</tr>
<tr>
<td><strong>CAUTION:</strong> When using a Futaba® transmitter with a Spektrum DSM module, you must reverse the throttle channel and rebind. Refer to your Futaba transmitter manual for instructions on reversing the throttle channel.</td>
</tr>
</tbody>
</table>

**Install a bind plug in the receiver bind port.**

**Place the aircraft on a level surface, connect the flight battery to the ESC. The ESC will produce a series of sounds. 3 flat tones followed immediately by 2 ascending tones confirm that the LVC is set correctly for the ESC.**

**The orange bind LED on the receiver will begin to flash rapidly.**

To trigger arming:
- Take 3 steps away from the aircraft/receiver and then power ON the transmitter while holding the transmitter bind button or switch. Refer to your transmitter’s manual for specific binding instructions.
  - **IMPORTANT:** Do not to point the transmitter’s antenna directly at the receiver while binding.
  - **IMPORTANT:** Keep away from large metal objects while binding.

The receiver is bound to the transmitter when the orange bind light on the receiver stays orange. The ESC will produce a series of sounds. 3 flat tones followed immediately by 2 ascending tones. The tones indicate the ESC is armed, provided the throttle stick and throttle trim are low enough to trigger arming.

**IMPORTANT:** Once bound, the receiver will retain its bind and last setting until it has been intentionally changed, even when power is cycled ON and OFF. However, if you notice that bind has been lost, simply repeat the binding process.

SAFE Select ON Indication
Every time the receiver is powered ON the surfaces will cycle back and forth twice with a slight pause at neutral position to indicate that SAFE Select is switched ON.

The throttle will not arm if the transmitter’s throttle control is not put at the lowest position. If you encounter problems, follow the binding instructions and refer to the transmitter troubleshooting guide for other instructions. If needed, contact the appropriate Horizon Product Support office.

<table>
<thead>

</thead>
<tbody>
<tr>
<td><strong>IMPORTANT:</strong> The included AR636 receiver has been programmed for operation specifically for this aircraft. Refer to the receiver manual for correct setup if the receiver is replaced or is used in another aircraft.</td>
</tr>
<tr>
<td><strong>CAUTION:</strong> When using a Futaba® transmitter with a Spektrum DSM module, you must reverse the throttle channel and rebind. Refer to your Futaba transmitter manual for instructions on reversing the throttle channel.</td>
</tr>
</tbody>
</table>

**Make sure the transmitter is powered off.**

**Move the transmitter controls to neutral (flight controls: rudder, elevators and ailerons) or to low positions (throttle, throttle trim).**

**Install a bind plug in the receiver bind port.**

**Place the aircraft on a level surface, connect the flight battery to the ESC. The ESC will produce a series of sounds. 3 flat tones followed immediately by 2 ascending tones confirm that the LVC is set correctly for the ESC.**

The orange bind LED on the receiver will begin to flash rapidly. Do NOT remove the bind plug at this time.

**Take 3 steps away from the aircraft/receiver and then power ON the transmitter while holding the transmitter bind button or switch. Refer to your transmitter’s manual for specific binding instructions.**

**IMPORTANT:** Do not to point the transmitter’s antenna directly at the receiver while binding.

**IMPORTANT:** Keep away from large metal objects while binding.

The receiver is bound to the transmitter when the orange bind light on the receiver stays orange. The ESC will produce a series of sounds. 3 flat tones followed immediately by 2 ascending tones. The tones indicate the ESC is armed, provided the throttle stick and throttle trim are low enough to trigger arming.

**IMPORTANT:** Once bound, the receiver will retain its bind and last setting until it has been intentionally changed, even when power is cycled ON and OFF. However, if you notice that bind has been lost, simply repeat the binding process.

SAFE Select OFF Indication
Every time the receiver is powered ON the surfaces will cycle back and forth once to indicate that SAFE Select has been switched OFF.

The throttle will not arm if the transmitter’s throttle control is not put at the lowest position. If you encounter problems, follow the binding instructions and refer to the transmitter troubleshooting guide for other instructions. If needed, contact the appropriate Horizon Product Support office.

*Failsafe: If the receiver loses transmitter communication, the failsafe will activate. When activated, failsafe moves the throttle channel to its preset failsafe position (low throttle) that was set during binding. All other channels move to actively level the aircraft in flight.*
**SAFE® Select Switch Designation**

SAFE® Select technology can be easily assigned to any open switch (two or three position) on the transmitter. With this new feature, you now have the flexibility to enable or disable the technology while in flight.

**IMPORTANT:** Before assigning your desired switch, ensure that the travel for that channel is set at 100% in both direction.

**Assigning a switch**

Bind the aircraft correctly to activate SAFE Select. This will allow the system to be assigned to a switch. Hold both transmitter sticks to the inside bottom corners and toggle the desired switch five times (one toggle = full up and down) to assign that switch. The control surfaces of the aircraft will move, indicating the switch has been selected. Repeat the process to deselect the switch or to assign a different switch if desired.

**TIP:** SAFE Select is assignable on any unused Channels 5–9.

---

**AS3X Control Direction Test**

This test ensures that the AS3X® control system is functioning properly. Assemble the aircraft and bind your transmitter to the receiver before performing this test.

1. Raise the throttle just above 25%, then lower the throttle to activate AS3X.

**CAUTION:** Keep all body parts, hair and loose clothing away from a moving propeller, as these items could become entangled.

**IMPORTANT:** The AR636 programming for this aircraft increases control surface movement when flaps are fully down.

2. Move the entire aircraft as shown and ensure the control surfaces move in the direction indicated in the graphic. If the control surfaces do not respond as shown, do not fly the aircraft. Refer to the receiver manual for more information.

Once the AS3X system is active, control surfaces may move rapidly. This is normal. AS3X remains active until the battery is disconnected.
**Center of Gravity (CG)**

The CG location is measured from the leading edge of the wing at the root. This CG location has been determined with the recommended Li-Po battery (EFLB22003S30) installed to the front edge of the battery tray.

Tip: Measure the CG with the aircraft inverted.

**In Flight Trimming**

During your first flight, trim the aircraft for level flight at 3/4 throttle with flaps and gear up. Make small trim adjustments with your transmitter’s trim switches to straighten the aircraft’s flight path.

After adjusting trim do not touch the control sticks for 3 seconds. This allows the receiver to learn the correct settings to optimize AS3X performance.

Failure to do so could affect flight performance.

**Flying Tips and Repairs**

Consult local laws and ordinances before choosing a flying location.

**Range Check your Radio System**

Before you fly, range check the radio system. Refer to your specific transmitter instruction manual for range test information.

**Oscillation**

Once the AS3X system is active (after advancing the throttle for the first time), you will normally see the control surfaces react to aircraft movement. In some flight conditions you may see oscillation (the aircraft rocks back and forth on one axis due to overcontrol). If oscillation occurs, refer to the Troubleshooting Guide for more information.

**Takeoff**

Place the aircraft facing into the wind. Set your transmitter in low rate and use your flaps switch to drop the flaps to takeoff or “half position”. Gradually increase the throttle to ¾ and steer with the rudder. Flaps make takeoffs shorter. As the tail comes off the ground, pull back gently on the elevator. When airborne, flip your gear switch to raise your landing gear. Climb to a comfortable altitude and then flip your flaps switch to level the flaps.

**Flying**

For your first flights with the recommended battery pack (EFLB22003S30), set your transmitter timer or a stopwatch to 5 minutes. After five minutes, land the aircraft. Adjust your timer for longer or shorter flights once you have flown the model. If at any time the motor pulses, land the aircraft immediately to recharge the flight battery. See the Low Voltage Cutoff (LVC) section for more details on maximizing battery health and run time.

**Landing**

Once on the ground, avoid sharp turns until the plane has slowed enough to prevent scraping the wingtips.

**Low Voltage Cutoff (LVC)**

When a Li-Po battery is discharged below 3V per cell, it will not hold a charge. The ESC protects the flight battery from over-discharge using Low Voltage Cutoff (LVC). Before the battery charge decreases too much, LVC removes power supplied to the motor. Power to the motor pulses, showing that some battery power is reserved for flight control and safe landing.

Disconnect and remove the Li-Po battery from the aircraft after use to prevent trickle discharge. Charge your Li-Po battery to about half capacity before storage. During storage, make sure the battery charge does not fall below 3V per cell. LVC does not prevent the battery from over-discharge during storage.

**Repairs**

Thanks to the Z-Foam™ material in this aircraft, repairs to the foam can be made using virtually any adhesive (hot glue, regular CA, epoxy, etc). When parts are not repairable, see the Replacement Parts List for ordering by item number. For a listing of all replacement and optional parts, refer to the list at the end of this manual.

**Repairs**

Thanks to the Z-Foam™ material in this aircraft, repairs to the foam can be made using virtually any adhesive (hot glue, regular CA, epoxy, etc). When parts are not repairable, see the Replacement Parts List for ordering by item number. For a listing of all replacement and optional parts, refer to the list at the end of this manual.

Tip: Monitor your aircraft battery’s voltage before and after flying by using a Li-Po Cell Voltage Checker (EFLA111, sold separately).

**Repairs**

Thanks to the Z-Foam™ material in this aircraft, repairs to the foam can be made using virtually any adhesive (hot glue, regular CA, epoxy, etc). When parts are not repairable, see the Replacement Parts List for ordering by item number. For a listing of all replacement and optional parts, refer to the list at the end of this manual.

When parts are not repairable, see the Replacement Parts List for ordering by item number. For a listing of all replacement and optional parts, refer to the list at the end of this manual.
Post Flight

1. Disconnect the flight battery from the ESC (Required for Safety and battery life).
2. Power OFF the transmitter.
3. Remove the flight battery from the aircraft.
4. Recharge the flight battery.
5. Repair or replace all damaged parts.
6. Store the flight battery apart from the aircraft and monitor the battery charge.
7. Make note of the flight conditions and flight plan results, planning for future flights.

Motor Service

![Disassembly Diagram]

**CAUTION:** Always disconnect the flight battery before performing motor service.

**Disassembly**

1. Remove the screw (A) and spinner (B) from the collet (C).
2. Remove the propeller (D), backplate (E) and collet from the motor shaft (F). Loosen the collet by using a small screw driver or hex wrench inserted into the small hole.
3. Remove the 4 screws (G) from the motor mount (H) and the fuselage.
4. Disconnect the motor wires from the ESC wires.
5. Remove the 4 screws (I) and motor (J) from the motor mount.

**Assembly**

Assemble in reverse order.
- Correctly align and connect the motor wire colors with the ESC wires.
- Install the propeller with the size numbers (10.5 x 8) facing out from the motor.
- Tighten the collet by using a small screw driver or hex wrench inserted into the small hole.

AMA National Model Aircraft Safety Code

Effective January 1, 2014

A. GENERAL
A model aircraft is a non-human-carrying aircraft capable of sustained flight in the atmosphere. It may not exceed limitations of this code and is intended exclusively for sport, recreation, education and/or competition. All model flights must be conducted in accordance with this safety code and any additional rules specific to the flying site.

1. Model aircraft will not be flown:
   (a) In a careless or reckless manner.
   (b) At a location where model aircraft activities are prohibited.

2. Model aircraft pilots will:
   (a) Yield the right of way to all man carrying aircraft.
   (b) See and avoid all aircraft and a spotter must be used when appropriate.
      (AMA Document #540-D.)
   (c) Not fly higher than approximately 400 feet above ground level within
      three (3) miles of an airport, without notifying the airport operator.
   (d) Not interfere with operations and traffic patterns at any airport, heliport
      or seaplane base except where there is a mixed use agreement.
   (e) Not exceed a takeoff weight, including fuel, of 55 pounds unless in
      compliance with the AMA Large Model Aircraft program. (AMA Document 520-A.)
   (f) Ensure the aircraft is identified with the name and address or AMA
      number of the owner on the inside or affixed to the outside of the
      model aircraft. (This does not apply to model aircraft flown indoors).
   (g) Not operate aircraft with metal-blade propellers or with gaseous boosts
      except for helicopters operated under the provisions of AMA Document
      #555.
   (h) Not operate model aircraft while under the influence of alcohol or while
      using any drug which could adversely affect the pilot’s ability to safely
      control the model.
   (i) Not operate model aircraft carrying pyrotechnic devices which explode
      or burn, or any device which propels a projectile or drops any object
      that creates a hazard to persons or property.
      Exceptions:
      • Free Flight fuses or devices that burn producing smoke and are
        securely attached to the model aircraft during flight.
      • Rocket motors (using solid propellant) up to a G-series size may
        be used provided they remain attached to the model during flight.
      Model rockets may be flown in accordance with the National
      Model Rocketry Safety Code but may not be launched from
      model aircraft.
   (j) Not operate a turbine-powered aircraft, unless in compliance with the
      AMA turbine regulations. (AMA Document #510-A).

3. Model aircraft will not be flown in AMA sanctioned events, air shows or
   model demonstrations unless:
   (a) The aircraft, control system and pilot skills have successfully
      demonstrated all maneuvers intended or anticipated prior to the
      specific event.
   (b) An inexperienced pilot is assisted by an experienced pilot.

4. When and where required by rule, helmets must be properly worn and
   fastened. They must be OSHA, DOT, ANSI, SNELL or NOCSAE approved or
   comply with comparable standards.

B. RADIO CONTROL
1. All pilots shall avoid flying directly over unprotected people, vessels,
   vehicles or structures and shall avoid endangerment of life and property
   of others.

2. A successful radio equipment ground-range check in accordance with
   manufacturer’s recommendations will be completed before the first flight
   of a new or repaired model aircraft.

3. At all flying sites a safety line(s) must be established in front of which all
   flying takes place (AMA Document #706.)
   (a) Only personnel associated with flying the model aircraft are allowed at
      or in front of the safety line.
   (b) At air shows or demonstrations, a straight safety line must be
      established.
   (c) An area away from the safety line must be maintained for spectators.
   (d) Intentional flying behind the safety line is prohibited.

4. RC model aircraft must use the radio-control frequencies currently allowed
   by the Federal Communications Commission (FCC). Only individuals
   properly licensed by the FCC are authorized to operate equipment on
   Amateur Band frequencies.

5. RC model aircraft will not operate within three (3) miles of any pre-existing
   flying site without a frequency-management agreement (AMA Documents
   #922 and #923.)

6. With the exception of events flown under official AMA Competition
   Regulations, excluding takeoff and landing, no powered model may be
   flown outdoors closer than 25 feet to any individual, except for the pilot
   and the pilot’s helper(s) located at the flight line.

7. Under no circumstances may a pilot or other person touch a model aircraft
   in flight while it is still under power, except to divert it from striking an
   individual.

8. RC night flying requires a lighting system providing the pilot with a clear
   view of the model’s attitude and orientation at all times. Hand-held illumi-
   nation systems are inadequate for night flying operations.

9. The pilot of a RC model aircraft shall:
   (a) Maintain control during the entire flight, maintaining visual contact
      without enhancement other than by corrective lenses prescribed for
      the pilot.
   (b) Fly using the assistance of a camera or First-Person View (FPV) only
      in accordance with the procedures outlined in AMA Document #550.
   (c) Fly using the assistance of autopilot or stabilization system only in
      accordance with the procedures outlined in AMA Document #560.

Please see your local or regional modeling association’s guidelines for proper, safe
operation of your model aircraft.
Limited Warranty

What this Warranty Covers – Horizon Hobby, LLC, (Horizon) warrants to the original purchaser that the product purchased (the “Product”) will be free from defects in materials and workmanship at the date of purchase.

What is Not Covered – This warranty is not transferable and does not cover (i) cosmetic damage, (ii) damage due to acts of God, accident, misuse, abuse, negligence, commercial use, or due to improper use, installation, operation or maintenance, (iii) modification of or to any part of the Product, (iv) attempted service by anyone other than a Horizon Hobby authorized service center, (v) Product not purchased from an authorized Horizon dealer, or (vi) Product not compliant with applicable technical regulations, or (vii) use that violates any applicable laws, rules, or regulations.

OTHER THAN THE EXPRESS WARRANTY ABOVE, HORIZON MAKES NO OTHER WARRANTY OR REPRESENTATION, AND HEREBY DISCLAIMS ANY AND ALL IMPLIED WARRANTIES, INCLUDING, WITHOUT LIMITATION, THE IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

Purchaser’s Remedy – Horizon’s sole obligation and purchaser’s sole and exclusive remedy shall be that Horizon will, at its option, either (i) service, or (ii) replace, any Product determined by Horizon to be defective. Horizon reserves the right to inspect any and all Product(s) involved in a warranty claim. Service or replacement decisions are at the sole discretion of Horizon. Proof of purchase is required for all warranty claims. SERVICE OR REPLACEMENT AS PROVIDED UNDER THIS WARRANTY IS THE PURCHASER’S SOLE AND EXCLUSIVE REMEDY.

Limitation of Liability – HORIZON SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY, REGARDLESS OF WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, TORT, NEGLIGENCE, STRICT LIABILITY OR ANY OTHER THEORY OF LIABILITY, EVEN IF HORIZON HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. Further, in no event shall the liability of Horizon exceed the individual price of the Product on which liability is asserted. As Horizon has no control over use, setup, final assembly, modification or misuse, no liability shall be assumed nor accepted for any resulting damage or injury. By the act of use, setup or assembly, the user accepts all resulting liability. If you as the purchaser or user are not prepared to accept the liability associated with the use of the Product, purchaser is advised to return the Product immediately in new and unused condition to the place of purchase.

Law – These terms are governed by Illinois law (without regard to conflict of law principals). This warranty gives you specific legal rights, and you may also have other rights which vary from state to state. Horizon reserves the right to change or modify this warranty at any time without notice.

WARRANTY SERVICES

Questions, Assistance, and Services – Your local hobby store and/or place of purchase cannot provide warranty support or service. Once assembly, setup or use of the Product has been started, you must contact your local distributor or Horizon directly. This will enable Horizon to better answer your questions and service you in the event that you may need any assistance. For questions or assistance, please visit our website at www.horizonhobby.com, submit a Product Support Inquiry, or call the toll free telephone number referenced in the Warranty and Service Contact Information section to speak with a Product Support representative.

Inspection or Services – If this Product needs to be inspected or serviced and is compliant in the country you live and use the Product in, please use the Horizon Online Service Request submission process found on our website or call Horizon to obtain a Return Merchandise Authorization (RMA) number. Pack the Product securely using a shipping carton. Please note that original boxes may be included, but are not designed to withstand the rigors of shipping without additional protection. Ship via a carrier that provides tracking and insurance for lost or damaged parcels, as Horizon is not responsible for merchandise until it arrives and is accepted at our facility. An Online Service Request is available at http://www.horizonhobby.com/content/_service-center_render-service-center. If you do not have internet access, please contact Horizon Product Support to obtain a RMA number along with instructions for submitting your product for service. When calling Horizon, you will be asked to provide your complete name, street address, email address and phone number where you can be reached during business hours. When sending product into Horizon, please include your RMA number, a list of the included items, and a brief summary of the problem. A copy of your original sales receipt must be included for warranty consideration. Be sure your name, address, and RMA number are clearly written on the outside of the shipping carton.

ATTENTION: Horizon service is limited to Product compliant in the country of use and ownership. If received, a non-compliant Product will not be serviced. Further, the sender will be responsible for arranging return shipment of the un-serviced Product, through a carrier of the sender’s choice and at the sender’s expense. Horizon will hold non-compliant Product for a period of 60 days from notification, after which it will be discarded.

NOTICE: Do not ship LiPo batteries to Horizon. If you have any issue with a LiPo battery, please contact the appropriate Horizon Product Support office.

Warranty Requirements – For Warranty consideration, you must include your original sales receipt verifying the proof-of-purchase date. Provided warranty conditions have been met, your Product will be serviced or replaced free of charge. Service or replacement decisions are at the sole discretion of Horizon.

Non-Warranty Service – Should your service not be covered by warranty, service will be completed and payment will be required without notification or estimate of the expense unless the expense exceeds 50% of the retail purchase cost. By submitting the item for service you are agreeing to payment of the service without notification. Service estimates are available upon request. You must include this request with your item submitted for service. Non-warranty service estimates will be billed a minimum of 1½ hour of labor. In addition you will be billed for return freight. Horizon accepts money orders and cashier’s checks, as well as Visa, MasterCard, American Express, and Discover cards. By submitting any item to Horizon for service, you are agreeing to Horizon’s Terms and Conditions found on our website http://www.horizonhobby.com/content/service-center_render-service-center.

ATTENTION: Horizon service is limited to Product compliant in the country of use and ownership. If received, a non-compliant Product will not be serviced. Further, the sender will be responsible for arranging return shipment of the un-serviced Product, through a carrier of the sender’s choice and at the sender’s expense. Horizon will hold non-compliant Product for a period of 60 days from notification, after which it will be discarded.

FCC Information

**FCC ID: BRWDASRX15**
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment to an outlet on a circuit different from that to which the receiver is connected.

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

**NOTICE:** Modifications to this product will void the user’s authority to operate this equipment.

This product contains a radio transmitter with wireless technology which has been tested and found to be compliant with the applicable regulations governing a radio transmitter in the 2.400GHz to 2.4835GHz frequency range.

**Antenna Separation Distance**
When operating your transmitter, please be sure to maintain a separation distance of at least 20 cm between your body (excluding fingers, hands, wrists, ankles and feet) and the antenna to meet RF exposure safety requirements as determined by FCC regulations.

This illustration shows the approximate 20 cm RF exposure area and typical hand placement when operating your transmitter.

IC Information

**IC ID: 6157A-AMRX15**
This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Compliance Information for the European Union

**EU Compliance Statement:**
EFL8950: Horizon Hobby, LLC hereby declares that this product is in compliance with the essential requirements and other relevant provisions of the RED and EMC Directives.
EFL8975: Horizon Hobby, LLC hereby declares that this product is in compliance with the essential requirements and other relevant provisions of the EMC Directive.
A copy of the EU Declaration of Conformity is available online at: http://www.horizonhobby.com/content/support-render-compliance.

**Instructions for disposal of WEEE by users in the European Union**
This product must not be disposed of with other waste. Instead, it is the user’s responsibility to dispose of their waste equipment by handing it over to a designated collections point for the recycling of waste electrical and electronic equipment. The separate collection and recycling of your waste equipment at the time of disposal will help to conserve natural resources and ensure that it is recycled in a manner that protects human health and the environment. For more information about where you can drop off your waste equipment for recycling, please contact your local city office, your household waste disposal service or where you purchased the product.
