F-15 Eagle
64mm EDF
As the user of this product, you are solely responsible for operating in a manner that does not endanger yourself and others or result in damage to the product or the property of others.

• Always keep a safe distance in all directions around your model to avoid collisions or injury. This model is controlled by a radio signal subject to interference from many sources outside your control. Interference can cause momentary loss of control.

• Always operate your model in open spaces away from full-size vehicles, traffic and people.

• Always carefully follow the directions and warnings for this and any optional support equipment (chargers, rechargeable battery packs, etc.).

• Always keep all chemicals, small parts and anything electrical out of the reach of children.

• Always avoid water exposure to all equipment not specifically designed and protected for this purpose. Moisture causes damage to electronics.

• Never place any portion of the model in your mouth as it could cause serious injury or even death.

• Never operate your model with low transmitter batteries.

• Always keep aircraft in sight and under control.

• Always use fully charged batteries.

• Always keep transmitter powered on while aircraft is powered.

• Always remove batteries before disassembly.

• Always keep moving parts clean.

• Always keep parts dry.

• Always let parts cool after use before touching.

• Always remove batteries after use.

• Always ensure failsafe is properly set before flying.

• Never operate aircraft with damaged wiring.

• Never touch moving parts.

SAFE® Select Technology (BNF Basic)

The evolutionary SAFE® Select technology can offer an extra level of protection so you can perform the first flight with confidence. No complex transmitter programming is required. Just follow the simple bind process to make the SAFE Select system active. When activated, bank and pitch limitations keep you from over-controlling and automatic self-leveling makes recovery from risky or confusing attitudes as simple as releasing the sticks. In fact, with the aileron, elevator and rudder sticks in the neutral position, SAFE Select will automatically keep the airplane in a straight and level attitude.

Expand the advantage of what SAFE® Select technology offers by assigning it to a switch. No transmitter programming is required and you’ll be able to turn the system ON and OFF with the flip of a switch. For example, turn SAFE select ON for takeoffs to counter cross winds. Turn it OFF in flight for unrestricted aerobatic performance, and turn it back ON when a buddy wants to try out your cool aircraft. Turn SAFE Select ON for landings. SAFE Select reduces your workload by compensating for pitch changes automatically, regardless of throttle position. It will help keep the correct pitch attitude and wings level during the final approach. Whether you’re a beginner or an expert, SAFE Select can make your flights a great experience.

When the normal bind process is followed, the SAFE Select system is disabled, leaving specially tuned AS3X® technology in place to deliver a pure, unrestricted flight experience.

**Preflight**

| 1. Remove and inspect contents. | 9. Make sure linkages move freely. |
| 2. Read this instruction manual thoroughly. | 10. Perform the Control Direction Test with the transmitter. |
| 3. Charge the flight battery. | 11. Perform the AS3X Control Direction Test with the aircraft. |
| 5. Fully assemble the airplane. | 13. Perform a radio system Range Test. |
| 6. Install the flight battery in the aircraft (once it has been fully charged). | 14. Find a safe open area to fly. |
| 7. Check the Center of Gravity (CG). | 15. Plan flight for flying field conditions. |
| 8. Bind the aircraft to your transmitter. |

**Transmitter Setup (BNF Basic)**

**Dual Rates**

*Take first flights in Low Rate. For landings, use high rate elevator.*

**NOTICE:** To ensure AS3X® technology functions properly, do not lower rate values below 50%. If lower rates are desired, manually adjust the position of the pushrods on the servo arm.

**NOTICE:** If oscillation occurs at high speed, refer to the Troubleshooting Guide for more information.

**Expo**

After first flights, you may adjust expo in your transmitter for each channel to fit your flying style.

Model Assembly

Landing Gear Installation

1. Install the nose gear with set screws. Use thread locking compound on the set screws. The flat spot will make the connection straight and secure.

2. Install the main gear with covers using the M2x8 flat head screws.

Wing Installation

1. Slide the wing tube into the fuselage.

2. Slide the wing panels on the wing tube. Ensure the wing panels are tight against the fuselage.

3. Using a 2mm hex wrench, install 4-M3x10 flat head screws to secure the main wing panels.

4. Connect the servo leads firmly. Make sure the wires are secure in the wing using the colored decals.
Model Assembly *Continued*

**Horizontal Stabilizer Installation**

1. Apply regular, (not Foam Safe) medium CA to the base of the horizontal stabilizer where it meets the fuselage.
2. Make sure the control horn faces down toward the bottom and fit each horizontal stabilizer to the fuselage.

**IMPORTANT!** Make sure the horizontal stabilizer is in alignment with the wing. Adjust as necessary before the CA fully cures.

3. On each side, attach the Z-bend of the elevator linkage to the center hole of the servo arm then attach the clevises to the outer hole of the elevator control horns. Slide the clevis retainer tube over the clevis to lock in place.

**IMPORTANT!** Adjust each pushrod clevis to make sure the travel of both elevators match and are centered.

**Vertical Stabilizer Installation**

1. Apply medium CA to the base of the vertical stabilizers where they meet the fuselage.
2. Fit the vertical stabilizer in place on the fuselage. Make sure the vertical stabilizers are straight up and down and point straight.
Missile Installation
1. Attach the missiles on each side of the tanks using medium CA glue.

TIP: Along the line where the Missile rack and the Fuel Tank connect, use a T-Pin or Hobby Knife to poke several small holes through the paint to help the glue adhere.

Nose Cone Installation
1. Attach the nose cone to the airplane. The cone is held in place with the magnet. For a more secure attachment, use medium CA glue.

2. Attach a missile assembly onto each wing by placing them into the slot and sliding back to lock in place. Ensure the long area of the tank faces forward. No glue is required.
PNP Receiver Selection and Installation

The Spektrum™ AR636 receiver is recommended for this airplane. If you choose to install another receiver, ensure that it is at least a 4-channel full range receiver. Refer to your receiver manual for correct installation and operation instructions.

Installation (AR636 shown)

1. Remove the canopy from the aircraft.
2. Connect the servos to the receiver. We recommend using a short servo extension on the bind port so it is easier to reach for binding and programming.
   
   1 = Throttle  
   2 = Aileron  
   3 = Elevator  
   4 = Rudder

3. Mount the receiver very securely using double sided tape so it is located in front of the steering servo. Make sure it is mounted as flat as possible with the label facing up and the wires facing back. You may need to use servo extensions for the aileron and elevator.
## Transmitter and Receiver Binding / Enabling and Disabling SAFE Select (BNF Basic)

This product requires an approved Spektrum™ DSM2®/DSMX® compatible transmitter. Visit www.bindrnfl.com for a complete list of approved transmitters.

The aircraft has an optional SAFE Select feature, which can be switched ON or OFF easily by binding in a specific manner as described below.

**IMPORTANT:** Before binding a transmitter, read the Transmitter Setup section of this manual to ensure that your transmitter is properly programmed for this aircraft.

### Bind Plug Installation

![Bind Plug Image]

### Binding Procedure / Switching ON SAFE Select

**IMPORTANT:** The included AR636 receiver has been programmed for operation specifically for this aircraft. Refer to the receiver manual for correct setup if the receiver is replaced or is used in another aircraft.

**CAUTION:** When using a Futaba® transmitter with a Spektrum DSM® module, you must reverse the throttle channel and rebind. Refer to your Spektrum module manual for binding and failsafe instructions. Refer to your Futaba transmitter manual for instructions on reversing the throttle channel.

1. Make sure the transmitter is powered off.
2. Move the transmitter controls to neutral (flight controls: rudder, elevators and ailerons) or to low positions (throttle, throttle trim). *
3. Install a bind plug in the receiver bind port.
4. Place the aircraft level on its wheels, then connect the flight battery to the ESC. The ESC will produce a series of sounds. Three flat tones followed immediately by two ascending tones confirm that the LVC is set correctly for the ESC. The orange bind LED on the receiver will begin to flash rapidly.
5. Remove the bind plug from the bind port.
6. Take three steps away from the aircraft /receiver and then power ON the transmitter while holding the transmitter bind button or switch. Refer to your transmitter’s manual for specific binding instructions.

**IMPORTANT:** Do not to point the transmitter’s antenna directly at the receiver while binding.

**IMPORTANT:** Keep away from large metal objects while binding.

7. The receiver is bound to the transmitter when the orange bind light on the receiver stays orange. The ESC will produce a series of sounds. Three or four flat tones followed immediately by two ascending tones. The tones indicate the number of cells in the battery and that the ESC is armed, provided the throttle stick and throttle trim are low enough to trigger arming.

**IMPORTANT:** Once bound, the receiver will retain its bind settings for that transmitter until it has been intentionally changed, even when power is cycled ON and OFF. Repeat the binding process as necessary.

### SAFE Select ON Indication

Every time the receiver is powered ON the surfaces will cycle back and forth twice with a slight pause at neutral position to indicate that SAFE Select is switched ON.

The throttle will not arm if the transmitter’s throttle control is not put at the lowest position. If problems are encountered, follow the binding instructions and refer to the transmitter troubleshooting guide for other instructions. If needed, contact the appropriate Horizon Product Support office.

*Failsafe*

If the receiver loses transmitter communication, the failsafe will activate. When activated, failsafe moves the throttle channel to its preset failsafe position (low throttle) that was set during binding. All other channels move to actively level the aircraft in flight.

### Switching ON SAFE Select Binding Sequence

![Switching ON SAFE Select Binding Sequence Diagram]

1. Install Bind Plug
2. RX in Bind Mode
3. Bind TX to RX
4. Remove Bind Plug

### Switching OFF SAFE Select Binding Sequence

![Switching OFF SAFE Select Binding Sequence Diagram]

1. Install Bind Plug
2. RX in Bind Mode
3. Bind TX to RX
4. Remove Bind Plug

### Binding Procedure / Switching OFF SAFE Select

**IMPORTANT:** The included AR636 receiver has been programmed for operation specifically for this aircraft. Refer to the receiver manual for correct setup if the receiver is replaced or is used in another aircraft.

**CAUTION:** When using a Futaba® transmitter with a Spektrum DSM® module, you must reverse the throttle channel and rebind. Refer to your Spektrum module manual for binding and failsafe instructions. Refer to your Futaba transmitter manual for instructions on reversing the throttle channel.

1. Make sure the transmitter is powered off.
2. Move the transmitter controls to neutral (flight controls: rudder, elevators and ailerons) or to low positions (throttle, throttle trim). *
3. Install a bind plug in the receiver bind port.
4. Place the aircraft level on its wheels, then connect the flight battery to the ESC. The ESC will produce a series of sounds. Three flat tones followed immediately by two ascending tones confirm that the LVC is set correctly for the ESC.

The orange bind LED on the receiver will begin to flash rapidly. DO NOT remove the bind plug at this time.

5. Take three steps away from the aircraft /receiver and then power ON the transmitter while holding the transmitter bind button or switch. Refer to your transmitter’s manual for specific binding instructions.

**IMPORTANT:** Do not to point the transmitter’s antenna directly at the receiver while binding.

**IMPORTANT:** Keep away from large metal objects while binding.

6. The receiver is bound to the transmitter when the orange bind light on the receiver stays orange. The ESC will produce a series of sounds. Three or four flat tones followed immediately by two ascending tones. The tones indicate the number of cells in the battery and that the ESC is armed, provided the throttle stick and throttle trim are low enough to trigger arming.

**IMPORTANT:** Once bound, the receiver will retain its bind settings for that transmitter until it has been intentionally changed, even when power is cycled ON and OFF. Repeat the binding process as necessary.

### SAFE Select OFF Indication

Every time the receiver is powered ON the surfaces will cycle back and forth once to indicate that SAFE Select has been switched OFF.

The throttle will not arm if the transmitter’s throttle control is not put at the lowest position. If problems are encountered, follow the binding instructions and refer to the transmitter troubleshooting guide for other instructions. If needed, contact the appropriate Horizon Product Support office.

---

* *Failsafe*

If the receiver loses transmitter communication, the failsafe will activate. When activated, failsafe moves the throttle channel to its preset failsafe position (low throttle) that was set during binding. All other channels move to actively level the aircraft in flight.
Battery Selection

We recommend the E-Flite® 2200mAh 3S 11.1V 30C LiPo battery (EFLB22003S30), for standard operation. The ESC and motor system are designed for both 3S and 4S LiPo batteries. If using a different battery, the battery should be of similar capacity, dimensions and weight of the E-Flite LiPo battery pack. Always be sure the model balances at the recommended CG with the battery chosen.

1. Apply the loop side (soft side) of the hook and loop tape (A) to the bottom of your battery.
2. Install a small piece of the Hook side of the hook and loop inside the fuselage where the battery will sit. Don’t make this too big or the battery will be difficult to remove.
3. Carefully lift the back of the canopy hatch (B) to remove.
4. Install the fully charged battery in the battery compartment as shown. See the Adjusting the Center of Gravity instructions for more information.
5. Make sure the flight battery is secured.
6. Lower the throttle and throttle trim to the lowest settings. Power on the Transmitter, then wait 5 seconds.
7. Connect the battery to the ESC (C) (the ESC is now armed).
8. Keep the aircraft immobile and away from wind or the system will not initialize.

The ESC will sound a series of tones. If the ESC sounds a continuous double beep after the flight battery is connected, recharge or replace the battery.

9. Reinstall the canopy hatch.

SAFE® Select Switch Designation

SAFE® Select technology can be easily assigned to any open switch (two or three position) on the transmitter. With this feature, you now have the flexibility to switch the SAFE feature on and off while in flight.

IMPORTANT: Before assigning your desired switch, ensure that the travel for that channel is set at 100% in both direction.

Assigning a switch

1. Bind the aircraft correctly to activate SAFE Select. This will allow the system to be assigned to a switch.
2. Hold both transmitter sticks to the inside bottom corners and toggle the desired switch five times (one toggle = full up and down) to assign that switch. The control surfaces of the aircraft will move, indicating the switch has been selected.

Repeat the process to assign a different switch if desired. If no switch is assigned, SAFE will be active at all times.

TIP: SAFE Select is assignable on any unused Channels 5–9

Mode 1 and 2 Transmitters

Two or three position switch

x 5

100%

100%
Clevis Installation and Control Centering

Clevis Adjustment
- Slide the clevis retainer off of the clevis to adjust the position on the control horn.
- Carefully spread the clevis, then insert the clevis pin into the desired hole in the control horn.
- Slide the clevis retainer back onto the clevis to secure the clevis to the control horn.

Control Surface Centering
After assembly and transmitter setup, confirm that the control surfaces are centered. If the control surfaces are not centered, mechanically center the control surfaces by adjusting the linkages.

If adjustment is required, turn the clevis on the linkage to change the length of the linkage between the servo arm and the control horn.

After binding a transmitter to the aircraft receiver, set the trims and sub-trims to 0, then adjust the clevises to center the control surfaces.

Control Horn and Servo Arm Settings
The table to the right shows the factory settings for the control horns and servo arms. Fly the aircraft at factory settings before making changes.

NOTICE: If control throws are changed from the factory settings, the gain values may need to be adjusted. Refer to your receiver manual for adjustment of gain values.

After flying, you may choose to adjust the linkage positions for the desired control response. See the table to the right.

Center of Gravity (CG)
The CG location is measured from the leading edge of the wing at the root. This CG location has been determined with the recommended Li-Po battery (EFLB22003S30).

The battery can be moved forward or back to adjust the CG.

NOTICE: Install the battery but do not arm the ESC while checking the CG. Personal injury may result.
Control Surface Direction

Ailerons
Switch the transmitter and connect the battery. Use the transmitter to operate the ailerons. View the aircraft from the rear when checking the control directions.
1. Move the right stick to the left. The left aileron will move up and the right aileron move down, causing the aircraft to bank left.
2. Move the right stick to the right. The left aileron will move down and the right aileron move up, causing the aircraft to bank right.

Elevators
3. Move the right stick toward the bottom of the transmitter. The elevators will move up, causing the aircraft to climb.
4. Move the right stick toward the top of the transmitter. The elevators will move down, causing the aircraft to pitch down.

AS3X Control Direction Test (BNF Basic)
This test ensures that the AS3X® control system is functioning properly. Assemble the aircraft and bind your transmitter to the receiver before performing this test.
1. Hold the aircraft and raise the throttle just above 25%, then lower the throttle to activate AS3X technology.

   CAUTION: Keep all body parts, hair and loose clothing away from the aircraft, as these items could become entangled.

2. Move the entire aircraft as shown and ensure the control surfaces move in the direction indicated in the graphic. If the control surfaces do not respond as shown, do not fly the aircraft. Check receiver orientation and AS3X programming.

Once the AS3X system is active, control surfaces may move rapidly. This is normal. AS3X remains active until the battery is disconnected.
In Flight Trimming (BNF Basic)

During your first flight, trim the aircraft for level flight at 3/4 throttle. Make small trim adjustments with your transmitter's trim switches to straighten the aircraft's flight path.

After adjusting the trim, do not touch the control sticks for 3 seconds. This allows the receiver to learn the correct settings to optimize AS3X performance.

Failure to do so could affect flight performance.

Flying Tips and Repairs

Consult local laws and ordinances before choosing a flying location.

Range Check your Radio System

Before you fly, range check the radio system. Refer to your specific transmitter instruction manual for range test information.

Oscillation

Once the AS3X system is active (after advancing the throttle for the first time), you will normally see the control surfaces react to aircraft movement. In some flight conditions you may see oscillation (the aircraft rocks back and forth on one axis due to overcontrol). If oscillation occurs, refer to the Troubleshooting Guide for more information.

Takeoff

Place the aircraft facing into the wind. Set your transmitter in low rate. Gradually increase the throttle to ¾ and steer with the rudder. As the plane reaches flying speed, pull back gently on the elevator. When airborne, climb to a comfortable altitude.

Flying

For your first flights with the recommended battery pack (EFLB22003S30), set your transmitter timer or a stopwatch to 3 minutes. After three minutes, land the aircraft. Adjust your timer for longer or shorter flights once you have flown the model. If at any time the motor power reduces, land the aircraft immediately to recharge the flight battery. See the Low Voltage Cutoff (LVC) section for more details on maximizing battery health and run time.

Landing

Land the aircraft into the wind. Use a small amount of throttle for the entire descent. Lower the throttle to ¼.

Keep the throttle on until the aircraft is ready to flare. During flare, keep the wings level and the aircraft pointed into the wind. Gently lower the throttle while pulling back on the elevator to bring the aircraft down on its wheels.

Once on the ground, avoid sharp turns until the plane has slowed enough to prevent scraping the wingtips.

NOTICE: If a crash is imminent, reduce the throttle. Failure to do so could result in extra damage to the airframe, as well as damage to the ESC and motor.

NOTICE: After any impact, always ensure the receiver is secure in the fuselage. If you replace the receiver, install the new receiver in the same orientation as the original receiver or damage may result.

NOTICE: Crash damage is not covered under warranty.

NOTICE: When you are finished flying, never leave the aircraft in direct sunlight or in a hot, enclosed area such as a car. Doing so can damage the aircraft.

Low Voltage Cutoff (LVC)

When a Li-Po battery is discharged below 3V per cell, it will not hold a charge. The ESC protects the flight battery from over-discharge using Low Voltage Cutoff (LVC). Before the battery charge decreases too much, LVC reduces power supplied to the motor showing that some battery power is low but there is still enough reserved for flight control and safe landing.

Disconnect and remove the Li-Po battery from the aircraft after use to prevent trickle discharge. Charge your Li-Po battery to about half capacity before long storage. During storage, make sure the battery charge never falls below 3V per cell. LVC does not prevent the battery from over-discharge during storage.

NOTICE: Repeated flying to LVC will damage the battery.

TIP: Monitor your aircraft battery's voltage before and after flying by using a Li-Po Cell Voltage Checker (EFLA111, sold separately).

Repairs

Thanks to the EPO foam material in this aircraft, repairs to the foam can be made using virtually any adhesive (hot glue, regular CA, epoxy, etc). When parts are not repairable, see the Replacement Parts List for ordering by item number. For a listing of all replacement and optional parts, refer to the list at the end of this manual.

NOTICE: Use of CA accelerant on your aircraft can damage paint. DO NOT handle the aircraft until accelerant fully dries.
Post Flight

1. Disconnect the flight battery from the ESC (Required for Safety and battery life).
2. Power OFF the transmitter.
3. Remove the flight battery from the aircraft.
4. Recharge the flight battery.
5. Repair or replace all damaged parts.
6. Store the flight battery apart from the aircraft and monitor the battery charge.
7. Make note of the flight conditions and flight plan results, planning for future flights.

Power Components Service

**CAUTION:** Always disconnect the flight battery before performing motor service.

Disassembly

1. Carefully remove the lower cover to gain access to the ESC. It is held on with flexible glue that can be gently pulled away.
2. Disconnect the motor connectors from the ESC.
3. To access the motor/fan unit, remove the two screws (one on each side).
4. Disassemble the motor/fan as needed.
   - Assembly in reverse order.
   - Make sure the spinner is fully seated on the fan blade for safe operation.
   - Make sure you match the colors on the ESC wires with the colors on the motor.

AMA National Model Aircraft Safety Code

Effective January 1, 2014

A. GENERAL

A model aircraft is a non-human-carrying aircraft capable of sustained flight in the atmosphere. It may not exceed limitations of this code and is intended exclusively for sport, recreation, education and/or competition. All model flights must be conducted in accordance with this safety code and any additional rules specific to the flying site.

1. Model aircraft will not be flown:
   (a) In a careless or reckless manner.
   (b) At a location where model aircraft activities are prohibited.

2. Model aircraft pilots will
   (a) Yield the right of way to all man carrying aircraft
   (b) See and avoid all aircraft and a spotter must be used when
   (c) Not fly higher than approximately 400 feet above ground level
       within three (3) miles of an airport, without notifying the airport
   (d) Not interfere with operations and traffic patterns at any airport,
       heliport or seaplane base except where there is a mixed use
   (e) Not exceed a takeoff weight, including fuel, of 55 pounds unless
       in compliance with the AMA Large Model Aircraft program.
   (f) Ensure the aircraft is identified with the name and address or AMA
       number of the owner on the inside or affixed to the outside of
       the model aircraft. (This does not apply to model aircraft flown
       indoors).
   (g) Not operate aircraft with metal-blade propellers or with gaseous
       boosts except for helicopters operated under the provisions of
       AMA Document #555.
   (h) Not operate model aircraft while under the influence of alcohol
       or while using any drug which could adversely affect the pilot’s
       ability to safely control the model.
   (i) Not operate model aircraft carrying pyrotechnic devices which
       explode or burn, or any device which propels a projectile or
       drops any object that creates a hazard to persons or property.

   Exceptions:
   • Free Flight fuses or devices that burn producing smoke and
     are securely attached to the model aircraft during flight.
   • Rocket motors (using solid propellant) up to a G-series size
     may be used provided they remain attached to the model
     during flight. Model rockets may be flown in accordance
     with the National Model Rocketry Safety Code but may not
     be launched from model aircraft.
   • Officially designated AMA Air Show Teams (AST) are
     authorized to use devices and practices as defined within
     the Team AMA Program Document (AMA Document #718).
   (j) Not operate a turbine-powered aircraft, unless in compliance with
       the AMA turbine regulations. (AMA Document #510-A).

3. Model aircraft will not be flown in AMA sanctioned events, air shows
   or model demonstrations unless:
   (a) The aircraft, control system and pilot skills have successfully
       demonstrated all maneuvers intended or anticipated prior to the
       specific event.
   (b) An inexperienced pilot is assisted by an experienced pilot.

4. When and where required by rule, helmets must be properly worn
   and fastened. They must be OSHA, DOT, ANSI, SNELL or NOCSAE
   approved or comply with comparable standards.

B. RADIO CONTROL

1. All pilots shall avoid flying directly over unprotected people, vessels,
   vehicles or structures and shall avoid endangerment of life and
   property of others.

2. A successful radio equipment ground-range check in accordance
   with manufacturer’s recommendations will be completed before the
   first flight of a new or repaired model aircraft.

3. At all flying sites a safety line(s) must be established in front of which
   all flying takes place (AMA Document #706.)
   (a) Only personnel associated with flying the model aircraft are
       allowed at or in front of the safety line.
   (b) At air shows or demonstrations, a straight safety line must be
       established.
   (c) An area away from the safety line must be maintained for
       spectators.
   (d) Intentional flying behind the safety line is prohibited.

4. RC model aircraft must use the radio-control frequencies currently
   allowed by the Federal Communications Commission (FCC). Only
   individuals properly licensed by the FCC are authorized to operate
   equipment on Amateur Band frequencies.

5. RC model aircraft will not operate within three (3) miles of any pre-
   existing flying site without a frequency-management agreement
   (AMA Documents #922 and #923.)

6. With the exception of events flown under official AMA Competition
   Regulations, excluding takeoff and landing, no powered model may
   be flown outdoors closer than 25 feet to any individual, except for
   the pilot and the pilot’s helper(s) located at the flight line.

7. Under no circumstances may a pilot or other person touch a model
   aircraft in flight while it is still under power, except to divert it from
   striking an individual.

8. RC night flying requires a lighting system providing the pilot with a
   clear view of the model’s attitude and orientation at all times. Hand-
   held illumination systems are inadequate for night flying operations.

9. The pilot of a RC model aircraft shall:
   (a) Maintain control during the entire flight, maintaining visual
       contact without enhancement other than by corrective lenses
       prescribed for the pilot.
   (b) Fly using the assistance of a camera or First-Person View
       (FPV) only in accordance with the procedures outlined in AMA
       Document #550.
   (C) Fly using the assistance of autopilot or stabilization system only
       in accordance with the procedures outlined in AMA Document
       #560.

Please see your local or regional modeling association's guidelines
for proper, safe operation of your model aircraft.
Limited Warranty

What this Warranty Covers
Horizon Hobby, LLC, (Horizon) warrants to the original purchaser that the product purchased (the “Product”) will be free from defects in materials and workmanship at the date of purchase.

What is Not Covered
This warranty is not transferable and does not cover (i) cosmetic damage, (ii) damage due to acts of God, accident, misuse, abuse, negligence, commercial use, or due to improper use, installation, operation or maintenance, (iii) modification of or to any part of the Product, (iv) attempted service by anyone other than a Horizon Hobby authorized service center, (v) Product not purchased from an authorized Horizon dealer, or (vi) Product not compliant with applicable technical regulations, or (vii) use that violates any applicable laws, rules, or regulations.

OTHER THAN THE EXPRESS WARRANTY ABOVE, HORIZON MAKES NO OTHER WARRANTY OR REPRESENTATION, AND HEREBY DISCLAIMS ANY AND ALL IMPLIED WARRANTIES, INCLUDING, WITHOUT LIMITATION, THE IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE PURCHASER ACKNOWLEDGES THAT THEY ALONE HAVE DETERMINED THAT THE PRODUCT WILL SUITABLY MEET THE REQUIREMENTS OF THE PURCHASER’S INTENDED USE.

Purchaser’s Remedy
Horizon’s sole obligation and purchaser’s sole and exclusive remedy shall be that Horizon will, at its option, either (i) service, or (ii) replace, any Product determined by Horizon to be defective. Horizon reserves the right to inspect any and all Product(s) involved in a warranty claim. Service or replacement decisions are at the sole discretion of Horizon. Proof of purchase is required for all warranty claims. SERVICE OR REPLACEMENT AS PROVIDED UNDER THIS WARRANTY IS THE PURCHASER’S SOLE AND EXCLUSIVE REMEDY.

Limitation of Liability
HORIZON SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY, REGARDLESS OF WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, TORT, NEGLIGENCE, STRICT LIABILITY OR ANY OTHER THEORY OF LIABILITY, EVEN IF HORIZON HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. Further, in no event shall the liability of Horizon exceed the individual price of the Product on which liability is asserted. As Horizon has no control over use, setup, final assembly, modification or misuse, no liability shall be assumed nor accepted for any resulting damage or injury. By the act of use, setup or assembly, the user accepts all resulting liability. If you as the purchaser or user are not prepared to accept the liability associated with the use of the Product, purchaser is advised to return the Product immediately in new and unused condition to the place of purchase.

Law
These terms are governed by Illinois law (without regard to conflict of law principals). This warranty gives you specific legal rights, and you may also have other rights which vary from state to state. Horizon reserves the right to change or modify this warranty at any time without notice.

WARRANTY SERVICES
Questions, Assistance, and Services
Your local hobby store and/or place of purchase cannot provide warranty support or service. Once assembly, setup or use of the Product has been started, you must contact your local distributor or Horizon directly. This will enable Horizon to better answer your questions and service you in the event that you may need any assistance. For questions or assistance, please visit our website at www.horizonhobby.com, submit a Product Support Inquiry, or call the toll free telephone number referenced in the Warranty and Service Contact Information section to speak with a Product Support representative.

Inspection or Services
If this Product needs to be inspected or serviced and is compliant in the country you live and use the Product in, please use the Horizon Online Service Request submission process found on our website or call Horizon to obtain a Return Merchandise Authorization (RMA) number. Pack the Product securely using a shipping carton. Please note that original boxes may be included, but are not designed to withstand the rigors of shipping without additional protection. Ship via a carrier that provides tracking and insurance for lost or damaged parcels, as Horizon is not responsible for merchandise until it arrives and is accepted at our facility. An Online Service Request is available at http://www.horizonhobby.com/content/_service-center_render-service-center. If you do not have internet access, please contact Horizon Product Support to obtain a RMA number along with instructions for submitting your product for service. When calling Horizon, you will be asked to provide your complete name, street address, email address and phone number where you can be reached during business hours. When sending product into Horizon, please include your RMA number, a list of the included items, and a brief summary of the problem. A copy of your original sales receipt must be included for warranty consideration. Be sure your name, address, and RMA number are clearly written on the outside of the shipping carton.

NOTE: Do not ship LiPo batteries to Horizon. If you have any issue with a LiPo battery, please contact the appropriate Horizon Product Support office.

Warranty Requirements
For Warranty consideration, you must include your original sales receipt verifying the proof-of-purchase date. Provided warranty conditions have been met, your Product will be serviced or replaced free of charge. Service or replacement decisions are at the sole discretion of Horizon.

Non-Warranty Service
Should your service not be covered by warranty, service will be completed and payment will be required without notification or estimate of the expense unless the expense exceeds 50% of the retail purchase cost. By submitting the item for service you agree to payment of the service without notification. Service estimates are available upon request. You must include this request with your item submitted for service. Non-warranty service estimates will be billed a minimum of ½ hour of labor. In addition you will be billed for return freight. Horizon accepts money orders and cashier’s checks, as well as Visa, MasterCard, American Express, and Discover cards. By submitting any item to Horizon for service, you are agreeing to Horizon’s Terms and Conditions found on our website http://www.horizonhobby.com/content/_service-center_render-service-center.

ATTENTION: Horizon service is limited to Product compliant in the country of use and ownership. If received, a non-compliant Product will not be serviced. Further, the sender will be responsible for arranging return shipment of the un-serviced Product, through a carrier of the sender’s choice and at the sender’s expense. Horizon will hold non-compliant Product for a period of 60 days from notification, after which it will be discarded.

FCC Information

FCC ID: BRWDASRX15

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

CAUTION: Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

This product contains a radio transmitter with wireless technology which has been tested and found to be compliant with the applicable regulations governing a radio transmitter in the 2.400GHz to 2.4835GHz frequency range.

Supplier’s Declaration of Conformity

F-15 Eagle 64mm EDF BNF Basic with AS3X and SAFE Select EFL9750

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

CAUTION: changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

IC Information

IC: 6157A-AMRX15
CAN ICES-3 (B)/NMB-3(B)

This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions:

1) this device may not cause interference, 2) this device must accept any interference, including interference that may cause undesired operation of the device.

Compliance Information for the European Union

EU Compliance Statement:
EFL9750 F-15 Eagle 64mm EDF PNP; Horizon Hobby, LLC hereby declares that this product is in compliance with the essential requirements and other relevant provisions of the EMC Directive.
EFL9775 F-15 Eagle 64mm EDF BNF BASIC; Horizon Hobby, LLC hereby declares that this product is in compliance with the essential requirements and other relevant provisions of the RED and EMC Directives.
A copy of the EU Declaration of Conformity is available online at: http://www.horizonhobby.com/content/support-render-compliance.

Instructions for disposal of WEEE by users in the European Union

This product must not be disposed of with other waste. Instead, it is the user's responsibility to dispose of their waste equipment by handing it over to a designated collections point for the recycling of waste electrical and electronic equipment. The separate collection and recycling of your waste equipment at the time of disposal will help to conserve natural resources and make sure that it is recycled in a manner that protects human health and the environment. For more information about where you can drop off your waste equipment for recycling, please contact your local city office, your household waste disposal service or where you purchased the product.
