Age Recommendation: Not for children under 14 years. This is not a toy.
Welcome to an exciting new world of flying possibilities. Bedrooms, conference rooms, garages, basements, break rooms, offices—all can be transformed into aerial RC playgrounds with the Ultra Micro Series Mini Vapor®. Its small size, negligible mass and proportional 3-channel control will let you confidently fly almost anywhere indoors without worrying about damage to it or the furniture.

Before you start exploring your new found flying opportunities, however, you must take some time to read this manual. It contains important information about some of the aircraft’s wind limitations, DSM2®/DSMX® technology, battery charging and much more. You’ll also find a handy troubleshooting guide. It’s all here to make sure your first flight, and every one after, is the best it can be.

Box Contents

- Includes
  - 6mm Brushed Motor
  - Super Lite DSMX® RX/ESC/Servos (PKZU1252)
  - Battery: 30mAh 3.7 25C Li-Po
  - Charger: 1S 3.7V Li-Po Battery Charger

To register your product online, go to www.parkzone.com
Charging the Battery

Your aircraft comes with a 1S 3.7V DC Li-Po battery charger and 1S 3.7V 30mAh 25C Li-Po battery. Refer to the charging warnings. It is recommended to charge the battery pack while you are inspecting the aircraft. The flight battery will be required to confirm proper aircraft operation in future steps.

Remove the cover on the bottom of the charger and install four of the included AA batteries, noting proper polarity. Replace the cover after the AA batteries are installed.

Battery Charging Process

NOTICE: Charge only batteries that are cool to the touch and are not damaged. Look at the battery to make sure it is not damaged e.g., swollen, bent, broken or punctured.

1. Connect the flight battery to the charger connector, noting proper polarity.

2. Always disconnect the flight battery from the charger immediately upon completion of charging.

CAUTION: Only use the included charger specifically designed to charge this Li-Po battery. Failure to do so could result in fire, causing injury or property damage.

CAUTION: Never exceed the recommended charge rate.

LED Indications

When you make the connection successfully, the LED on the charger turns solid red, indicating charging has begun.

Charging a fully discharged (not over-discharged) 30mAh battery takes approximately 15–20 minutes. As the battery nears full charge, the LED begins to blink. The intervals between blinks will increase as the battery comes closer to full charge.

When the LED blinks approximately every 20 seconds, the battery is ready to be removed. However, the battery can be left charging until the LED completely goes out for a maximum charge.

CAUTION: Once charging is complete, immediately remove the battery. Never leave a battery connected to the charger.
Low Voltage Cutoff (LVC)

When a Li-Po battery is discharged below 3V per cell, it will not hold a charge. The aircraft’s ESC protects the flight battery from over-discharge using Low Voltage Cutoff (LVC). Before the battery charge decreases too much, LVC removes power supplied to the motor. Power to the motor quickly decreases and increases, showing that some battery power is reserved for flight control and safe landing.

When the motor power pulses, land the aircraft immediately and recharge the flight battery.

Disconnect and remove the Li-Po battery from the aircraft after use to prevent trickle discharge. Fully charge your Li-Po battery before storing it. During storage, make sure the battery charge does not fall below 3V per cell.

For your first flights, set your transmitter timer or a stopwatch to 5 minutes. Adjust your timer for longer or shorter flights once you have flown the model. Flights of 6 minutes or more are achievable if using proper throttle management.

NOTICE: Repeated flying to LVC will damage the battery.

Charging Warnings

The Battery Charger (EFLC1002) included with your aircraft has been designed to safely charge the Li-Po battery.

⚠️ CAUTION: All instructions and warnings must be followed exactly. Mishandling of Li-Po batteries can result in a fire, personal injury and/or property damage.

- By handling, charging or using the included Li-Po battery, you assume all risks associated with lithium batteries.
- If at any time the battery begins to balloon or swell, discontinue use immediately. If charging or discharging, discontinue and disconnect. Continuing to use, charge or discharge a battery that is ballooning or swelling can result in fire.
- Always store the battery at room temperature in a dry area for best results.
- Always transport or temporarily store the battery in a temperature range of 40–120º F (5–49º C). Do not store the battery or model in a car or direct sunlight. If stored in a hot car, the battery can be damaged or even catch fire.
- Always charge batteries away from flammable materials.
- Always inspect the battery before charging.
- Always disconnect the battery after charging, and let the charger cool between charges.
- Always constantly monitor the temperature of the battery pack while charging.
- ONLY USE A CHARGER SPECIFICALLY DESIGNED TO CHARGE LI-PO BATTERIES. Failure to charge the battery with a compatible charger may cause a fire resulting in personal injury and/or property damage.
- Never discharge Li-Po cells to below 3V under load.
- Never cover warning labels with hook and loop strips.
- Never leave charging batteries unattended.
- Never charge batteries outside recommended levels.
- Never charge damaged batteries.
- Never attempt to dismantle or alter the charger.
- Never allow minors to charge battery packs.
- Never charge batteries in extremely hot or cold places (recommended between 40–120º F or 5–49º C) or place in direct sunlight.
- Always store the battery at room temperature in a dry area for best results.
- Always transport or temporarily store the battery in a temperature range of 40–120º F (5–49º C). Do not store the battery or model in a car or direct sunlight. If stored in a hot car, the battery can be damaged or even catch fire.
- Always charge batteries away from flammable materials.
- Always inspect the battery before charging.
- Always disconnect the battery after charging, and let the charger cool between charges.
- Always constantly monitor the temperature of the battery pack while charging.
- ONLY USE A CHARGER SPECIFICALLY DESIGNED TO CHARGE LI-PO BATTERIES. Failure to charge the battery with a compatible charger may cause a fire resulting in personal injury and/or property damage.
- Never discharge Li-Po cells to below 3V under load.
- Never cover warning labels with hook and loop strips.
- Never leave charging batteries unattended.
- Never charge batteries outside recommended levels.
- Never charge damaged batteries.
- Never attempt to dismantle or alter the charger.
- Never allow minors to charge battery packs.
- Never charge batteries in extremely hot or cold places (recommended between 40–120º F or 5–49º C) or place in direct sunlight.

For your first flights, set your transmitter timer or a stopwatch to 5 minutes. Adjust your timer for longer or shorter flights once you have flown the model. Flights of 6 minutes or more are achievable if using proper throttle management.

NOTICE: Repeated flying to LVC will damage the battery.

Low Voltage Cutoff (LVC)
Installing Transmitter Batteries

Your ParkZone® 4-channel DSM2/DSMX RTF transmitter comes pre-bound to the aircraft. Remove the cover, install four of the included batteries (noting proper polarity) and reinstall the cover.

Transmitter and Receiver Binding

Binding is the process of programming the receiver of the control unit to recognize the GUID (Globally Unique Identifier) code of a single specific transmitter. You need to ‘bind’ your chosen Spektrum™ DSM® technology equipped aircraft transmitter to the receiver for proper operation.

For a list of compatible DSM2®/DSMX® transmitters, please visit www.bindnfly.com.

⚠️ CAUTION: When using a Futaba® transmitter with a Spektrum DSM module, you must reverse the throttle channel and rebind. Refer to your Spektrum module manual for binding and failsafe instructions. Refer to your Futaba transmitter manual for instructions on reversing the throttle channel.

 Binding Procedure Reference Table

1. Refer to your transmitter’s unique instructions for binding to a receiver.
2. Make sure the flight battery is disconnected from the aircraft.
3. Ensure the transmitter is powered OFF
4. Connect the flight battery to the aircraft. The receiver LED will begin to flash (typically after 5 seconds).
5. Put your transmitter into bind mode. If you are using the transmitter that is supplied with the RTF version, push the left control stick vertically into the case (until it clicks) while powering ON the transmitter.
6. Make sure the transmitter controls are at neutral and the throttle is in the low position.
7. After 5 to 10 seconds, the receiver status LED will become solid, indicating that the receiver is bound to the transmitter. If the LED does not turn solid, refer to the Troubleshooting Guide at the end of the manual.

For subsequent flights, power on the transmitter for 5 seconds before connecting the flight battery.
Installing the Flight Battery and Arming the ESC

Arming the ESC also occurs after binding as previously described, but subsequent connection of a flight battery requires the following steps.

**CAUTION:** Always keep hands away from propeller. When armed, the motor will turn the propeller in response to any throttle movement.

**CAUTION:** Always disconnect the Li-Po battery from the aircraft receiver when not flying to avoid over-discharging the battery. Batteries discharged to a voltage lower than the lowest approved voltage may become damaged, resulting in loss of performance and potential fire when batteries are charged.

1. Charge the flight battery.
2. Install the flight battery in the aircraft (once it has been fully charged).
3. Bind the aircraft to the transmitter (BNF only).
4. Make sure the linkages move freely.

**CAUTION:** Always disconnect the Li-Po battery from the aircraft receiver when not flying to avoid over-discharging the battery.

**Continuous LED**

- Lower throttle and throttle trim to lowest settings.
- Power ON the Transmitter, then wait 5 seconds.
- Secure the battery to the hook and loop strip on the battery holder. Connect the battery to the ESC, noting proper polarity.

**Preflight Checklist**

| ✓ | 1. Charge the flight battery. |
| ✓ | 2. Install the flight battery in the aircraft (once it has been fully charged). |
| ✓ | 3. Bind the aircraft to the transmitter (BNF only). |
| ✓ | 4. Make sure the linkages move freely. |
| ✓ | 5. Perform the Control Direction Test with the transmitter. |
| ✓ | 6. Adjust the center of gravity. |
| ✓ | 7. Find a safe and open area. |
| ✓ | 8. Plan flight appropriate for flying location. |
### Transmitter Control

**Digital Trims**
The ParkZone® 4-channel DSM2/DSMX transmitter features digital trim buttons on all controls to make fine adjustments. The digital trims are used to fine-tune the model’s flight path when in flight.

Before the first flight, center the control surfaces mechanically (see Control Centering).

When pressed down, trim buttons make a sound that increases or decreases in pitch at each pressing. The middle or neutral trim position is heard as a middle tone in the pitch range of the sounds. The end of the control range is sounded by a series of beeps.

**Dual Rate Function**
This transmitter’s dual rate feature lets you change between high and low control rates for the elevator and rudder.

- When powered ON, this transmitter is automatically set to high-rate mode.
- Change rate modes by pushing the right-hand control stick vertically into the case (until it clicks) while the transmitter is powered on.
- High-rate mode is shown by the transmitter’s LED glowing solid red. In high-rate mode, the controls can reach their maximum values. This mode is typically preferred by experienced pilots for maximum control authority.
- Low-rate mode is shown by the transmitter’s LED blinking continuously. In low-rate mode, the controls are reduced to approximately 70% of their maximum values. This mode is typically preferred by (and best for) beginner pilots or others interested in smoother and more easily controlled flight.

![Transmitter Control Diagram]
Control Direction Test

Bind your aircraft and transmitter before doing these tests. Move the controls on the transmitter to make sure aircraft control surfaces move correctly. **Always keep throttle at the low position during testing.**
Control Centering

Before first flights, or in the event of an accident, make sure the flight control surfaces are centered. Adjust the linkages mechanically if the control surfaces are not centered.

Use of the transmitter trims may not correctly center the aircraft control surfaces due to the mechanical limits of linear servos.

1. Make sure the control surfaces are neutral when the transmitter controls and trims are centered. The transmitter sub-trim must be set to zero.
2. When needed, use a pair of pliers to carefully bend the metal of the linkage (see illustration).
3. Make the U-shape narrower to make the connector shorter. Make the U-shape wider to make the linkage longer.

Settings for Control Horns

The illustration shows factory settings for linkages on the control horns. After flying, if you want to modify control throw, carefully adjust the linkage positions for desired control response.

Reverse Controls

NOTICE: The Mini Vapor RTF should not require any servo reversing. Should the Mini Vapor electronic components be used in another aircraft, you may find it necessary to reverse the operation of the flight control surfaces.

The transmitter included with the Mini Vapor is the same transmitter included in other ParkZone Ultra Micro RTF models.

1. Ensure the battery is disconnected from the aircraft and the transmitter is turned OFF.
2. Press and hold the digital trim button for the surface you would like to reverse.
3. While holding the digital trim button, turn the transmitter ON.
4. Hold the digital trim buttons down for approximately 5 seconds until you hear a tone confirming the selection.
5. Connect the flight battery and complete the flight control test. Confirm all surfaces operate in the correct direction.

NOTICE: When using a programmable transmitter, do not use Sub-Trim to adjust the center position of the servo.

NOTICE: Never set Travel Adjust above 100%. Ultra Micro servos are unique in that they are calibrated to reach maximum travel at 100% travel adjust. Increasing the value above 100% will NOT result in more travel, but can cause the servo to lock and will result in a crash.
Control Rates

We recommend using a DSM2/DSMX aircraft transmitter capable of dual rates. Adjust according to individual preferences after initial flight.

It is normal for linear servos to make noise. Noise is not an indication of a faulty servo.

To achieve the proper Low Rate settings when using a programmable DSM aircraft transmitter, set the low rate value to 70% for elevator and rudder.

Adjusting Center of Gravity (CG)

The CG location is **60mm** back from the leading edge of the center of the wing.

This CG location has been determined with the included 1S 30mAh 3.7V Li-Po battery installed in the battery holder.

Balance the model on the edge of a metal ruler to find the Center of Gravity. Place the ruler on the underside side of the airframe.
Motor Service

**CAUTION:** DO NOT handle propeller parts while the flight battery is connected. Personal injury could result.

### Disassembly

1. Disconnect the battery from the ESC/receiver.
2. Hold the spur gear and turn the propeller counterclockwise (looking from the front of the model) to remove. Turn the propeller clockwise to install. Make sure the propeller size numbers (125 x 39) face away from the motor (see illustration).
3. Hold the nut on the end of the prop shaft using needle-nose pliers or hemostats.
4. Turn the gear on the shaft clockwise (looking from front of model) to remove the nut.
5. Gently pull the shaft (A) from the gearbox (B) and make sure the washer (C) and two bushings (D) are not lost.
6. Disconnect the motor from the ESC/receiver.
7. Gently push the motor out of the gearbox and remove the motor.

**NOTICE:** DO NOT remove the gearbox from the aircraft. Damage to the aircraft will result.

### Assembly

Assemble the aircraft using the instructions above in reverse order.
- Correctly align the prop shaft gear with the pinion gear on the motor.
- Correctly connect the motor to the ESC/receiver so that the powered motor turns the propeller clockwise (looking from the front of the model).
Flying Tips and Repairs

We recommend flying your Mini Vapor in an indoor location with a floor area of 15 ft x 15 ft and a minimum ceiling height of 8 ft; a living room or office is ideal. We suggest first flights take place in a larger area, like a garage or basement.

We do not recommend flying the Mini Vapor outdoors unless the conditions are absolutely calm. The Mini Vapor is extremely light and can be easily blown away.

Hand Launching

Hold the Mini Vapor at shoulder height with one hand. While holding your transmitter in your other hand, increase the throttle to half. Launch the Mini Vapor using light force. Keep the wings level and do not throw it up or down. Point it level with the ground when releasing. Do not grasp the pushrods while launching as this may result in damage to the servos.

Runway Takeoff

Place the Mini Vapor in position for takeoff. Gradually increase the throttle to full and steer with the rudder. Pull back gently with the elevator and climb to check trim. Once the trim is adjusted, begin exploring the flight envelope of the Mini Vapor.

Flying

After takeoff, the Mini Vapor will climb at 3/4 to full throttle. The Mini Vapor is designed for a slow and relaxing flight experience. Fly at a slow, controlled speed appropriate for the size of the location.

Landing

Fly the aircraft to approximately 6 inches (15cm) or less above the landing surface. Reduce the throttle and the Mini Vapor should glide in softly for a landing.

Failure to lower the throttle stick and trim to the lowest possible positions during a crash could result in damage to the ESC in the receiver unit, which may require replacement.

NOTICE: Crash damage is not covered under warranty.

Repairs

Repair the Mini Vapor using clear tape. When parts are not repairable, see the Replacement Parts List for ordering by item number.

For a listing of all replacement and optional parts, refer to the list at the back of this manual.
Additional Safety Precautions and Warnings

As the user of this product, you are solely responsible for operating it in a manner that does not endanger yourself and others or result in damage to the product or the property of others.

- Always keep a safe distance in all directions around your model to avoid collisions or injury. This model is controlled by a radio signal subject to interference from many sources outside your control. Interference can cause momentary loss of control.
- Always operate your model in open spaces away from full-size vehicles, traffic and people.
- Always carefully follow the directions and warnings for this and any optional support equipment (chargers, rechargeable battery packs, etc.).
- Always keep all chemicals, small parts and anything electrical out of the reach of children.
- Always avoid water exposure to all equipment not specifically designed and protected for this purpose. Moisture causes damage to electronics.
- Never place any portion of the model in your mouth as it could cause serious injury or even death.
- Never operate your model with low transmitter batteries.
- Always keep the aircraft in sight and under control.
- Always use fully charged batteries.
- Always keep the transmitter powered ON while the aircraft is powered.
- Always remove batteries before disassembly.
- Always keep moving parts clean.
- Always keep parts dry.
- Always let parts cool after use before touching.
- Always remove batteries after use.
- Always ensure failsafe is properly set before flying.
- Never operate aircraft with damaged wiring.
- Never touch moving parts.

Post Flight Checklist

| ✔ | 1. Disconnect the flight battery from the ESC (Required for safety and battery life). |
| ✔ | 2. Power OFF the transmitter. |
| ✔ | 3. Remove the flight battery from the aircraft. |

| ✔ | 4. Recharge the flight battery. |
| ✔ | 5. Store the flight battery apart from the aircraft and monitor the battery charge. |
| ✔ | 6. Make note of the flight conditions and flight plan results, planning for future flights. |

Limited Warranty

What this Warranty Covers
Horizon Hobby, Inc. (“Horizon”) warrants to the original purchaser that the product purchased (the “Product”) will be free from defects in materials and workmanship at the date of purchase.

What is Not Covered
This warranty is not transferable and does not cover (i) cosmetic damage, (ii) damage due to acts of God, accident, misuse, abuse, negligence, commercial use, or due to improper use, installation, operation or maintenance, (iii) modification of or to any part of the Product, (iv) attempted service by anyone other than a Horizon Hobby authorized service center, (v) Product not purchased from an authorized Horizon dealer, or (vi) Product not compliant with applicable technical regulations.

OTHER THAN THE EXPRESS WARRANTY ABOVE, HORIZON MAKES NO OTHER WARRANTY OR REPRESENTATION, AND HEREBY DISCLAIMS ANY AND ALL IMPLIED WARRANTIES, INCLUDING, WITHOUT LIMITATION, THE IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE PURCHASER ACKNOWLEDGES THAT THEY ALONE HAVE DETERMINED THAT THE PRODUCT WILL SUITABLY MEET THE REQUIREMENTS OF THE PURCHASER’S INTENDED USE.

Purchaser’s Remedy
Horizon’s sole obligation and purchaser’s sole and exclusive remedy shall be that Horizon will, at its option, either (i) service, or (ii) replace, any Product determined by Horizon to be defective. Horizon reserves the right to inspect any and all Product(s) involved in a warranty claim. Service or replacement decisions are at the sole discretion of Horizon. Proof of purchase is required for all warranty claims. SERVICE OR REPLACEMENT AS PROVIDED UNDER THIS WARRANTY IS THE PURCHASER’S SOLE AND EXCLUSIVE REMEDY.

Limitation of Liability
HORIZON SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY, REGARDLESS OF WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, TORT, NEGLIGENCE, STRICT LIABILITY OR ANY OTHER THEORY OF LIABILITY, EVEN IF HORIZON HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. Further, in no event shall the liability of Horizon exceed the individual price of the Product on which liability is asserted. As Horizon has no control over use, setup, final assembly, modification or misuse, no liability shall be assumed nor accepted for any resulting damage or injury. By the act of use, setup or assembly, the user accepts all resulting liability. If you as the purchaser or user are not prepared to accept the liability associated with the use of the Product, purchaser is advised to return the Product immediately in new and unused condition to the place of purchase.

Law
These terms are governed by Illinois law (without regard to conflict of law principals). This warranty gives you specific legal rights, and you may also have other rights which vary from state to state. Horizon reserves the right to change or modify this warranty at any time without notice.

---

WARRANTY SERVICES

Questions, Assistance, and Services

Your local hobby store and/or place of purchase cannot provide warranty support or service. Once assembly, setup or use of the Product has been started, you must contact your local distributor or Horizon directly. This will enable Horizon to better answer your questions and service you in the event that you may need any assistance. For questions or assistance, please visit our website at www.horizonhobby.com, submit a Product Support Inquiry, or call 877.504.0233 toll free to speak to a Product Support representative.

Inspection or Services

If this Product needs to be inspected or serviced and is compliant in the country you live and use the Product in, please use the Horizon Online Service Request submission process found on our website or call Horizon to obtain a Return Merchandise Authorization (RMA) number. Pack the Product securely using a shipping carton. Please note that original boxes may be included, but are not designed to withstand the rigors of shipping without additional protection. Ship via a carrier that provides tracking and insurance for lost or damaged parcels, as Horizon is not responsible for merchandise until it arrives and is accepted at our facility. An Online Service Request is available at http://www.horizonhobby.com/content/_service-center_render-service-center. If you do not have internet access, please contact Horizon Product Support to obtain a RMA number along with instructions for submitting your product for service. When calling Horizon, you will be asked to provide your complete name, street address, email address and phone number where you can be reached during business hours. When sending product into Horizon, please include your RMA number, a list of the included items, and a brief summary of the problem. A copy of your original sales receipt must be included for warranty consideration. Be sure your name, address, and RMA number are clearly written on the outside of the shipping carton.

NOTICE: Do not ship LiPo batteries to Horizon. If you have any issue with a LiPo battery, please contact the appropriate Horizon Product Support office.

Warranty Requirements

For Warranty consideration, you must include your original sales receipt verifying the proof-of-purchase date. Provided warranty conditions have been met, your Product will be serviced or replaced free of charge. Service or replacement decisions are at the sole discretion of Horizon.

Non-Warranty Service

Should your service not be covered by warranty, service will be completed and payment will be required without notification or estimate of the expense unless the expense exceeds 50% of the retail purchase cost. By submitting the item for service you are agreeing to payment of the service without notification. Service estimates are available upon request. You must include this request with your item submitted for service. Non-warranty service estimates will be billed a minimum of ½ hour of labor. In addition you will be billed for return freight. Horizon accepts money orders and cashier's checks, as well as Visa, MasterCard, American Express, and Discover cards. By submitting any item to Horizon for service, you are agreeing to Horizon's Terms and Conditions found on our website http://www.horizonhobby.com/content/_service-center_render-service-center.

NOTICE: Horizon service is limited to Product compliant in the country of use and ownership. If non-compliant product is received by Horizon for service, it will be returned unserviced at the sole expense of the purchaser.

FCC Information
This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

⚠️ CAUTION: Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

This product contains a radio transmitter with wireless technology that has been tested and found to be compliant with the applicable regulations governing a radio transmitter in the 2.400GHz to 2.4835GHz frequency range.

Compliance Information for the European Union
Declaration of Conformity
(in accordance with ISO/IEC 17050-1)
No. HH2012070801
Product(s): PKZ Mini-Vapor BNF
Item Number(s): PKZU1280
Equipment class: 1
The object of declaration described above is in conformity with the requirements of the specifications listed below, following the provisions of the European R&TTE directive 1999/5/EC, EMC Directive 2004/108/EC and LVD Directive 2006/95/EC
EN 301 489-1 V1.7.1: 2006
EN 301 489-17 V1.3.2: 2008
EN 60950-1:2006+A12: 2011
EN55022: 2010
EN55024: 2010

Instructions for disposal of WEEE by users in the European Union
This product must not be disposed of with other waste. Instead, it is the user’s responsibility to dispose of their waste equipment by handing it over to a designated collections point for the recycling of waste electrical and electronic equipment. The separate collection and recycling of your waste equipment at the time of disposal will help to conserve natural resources and ensure that it is recycled in a manner that protects human health and the environment. For more information about where you can drop off your waste equipment for recycling, please contact your local city office, your household waste disposal service or where you purchased the product.
